From the President

Ultra Clean Systems strives to offer you the most robust, versatile, timesaving, and energy-efficient ultrasonic cleaning systems in the medical industry. We firmly believe that patient and technician safety come first, so we engineer, manufacture, and service our products with that mindset daily.

Cleaner, Faster, Better—it is our promise to you.

Sincerely,
Becky Cale
President,
Ultra Clean Systems, Inc.

Clean Smarter

Combine our full line of ultrasonic cleaners, detergents, brushes, and surgical care products with our dedication to quality, and it’s clear that Ultra Clean Systems is your partner in sterile processing.

Ultra Clean Systems is big enough to meet all your sterile processing needs, but small enough to be efficient. We respond to your needs within hours, not days or weeks.

Cleaner • Faster • Better

Commitment to Quality

As a leader in sterile processing, Ultra Clean Systems is committed to quality with every machine, every time. We use only parts that have been certified by the National Recognized Testing Lab (NRTL) for maximum safety in hospital environments. Every ultrasonic cleaner is proudly made in the U.S.A. by highly skilled craftspeople.

Our commitment doesn’t end with the build process. We understand that your time is valuable, which is why we take the time to rigorously test every machine before it leaves our facility.

Since 1999, we have been leading the industry with efficient designs that provide the most throughput, while enhancing patient safety. The quality of our products and service is reflected in the ISO 9001 quality management and ISO 13485 medical devices standards to which we adhere.

Titanium Rod Transducer (TRT) Technology

Ultra Clean Systems continues to raise the standard in the world of ultrasonic instrument cleaning by offering Titanium Rod Transducer technology. TRT technology produces a high cavitation energy output, reducing cleaning times and enhancing efficiency. This industry-leading technology is ideal for cleaning complex instruments, including those used in laparoscopic, orthopedic, ophthalmic, and robotic surgeries.

TRT Features and Benefits

- Reduced cleaning times compared to bonded transducers
- More cleaning power, reduced wash-cycle time, and helps eliminate bottlenecks
- 8- to 13-minute ultrasonic cleaning cycle
- 15-minute da Vinci® cycle
- Longer machine life
- Less maintenance, reducing down time and associated costs
- Thorough cleaning allows you to keep your sets together

Put Your Sterile Processing Department in a Better Light

Help promote safe cleaning conditions for SPD personnel, as well as improve patient safety and destroy microbes early in the instrument-cleaning process. Every Triton machine is designed with a specialized UV water treatment system, which kills microorganisms through ultraviolet germicidal irradiation.

It’s a fact that UV light energy helps to reduce infection by killing bacteria. Ultra Clean Systems is the only company that brings you this added safety feature for both you and the patients you protect from infection.

Water that enters the basin is deactivated from many types of harmful microbes. When cleaning cannulated instruments, recirculated water continuously works to kill bacteria, thus making your instruments safer much earlier in the cleaning process.
Triton³⁶ Automatic Ultrasonic Cleaning System

Ultra Clean Systems proudly offers the Triton Series, designed to keep up with the hectic schedule of today’s central sterile departments. Every Triton tray can process up to 10 robotic or lumen instruments. With our custom adapters and Robotic Arm Cleaning Systems trays (RACS), every type of robotic instrument can be reprocessed.

The Triton 36 cleans two complete sets of da Vinci® Xi-series instruments in 15 minutes. This complete system is user friendly, with automatic lifts and a simple, efficient slide-and-lock tray system. The Triton 36 cleaning system is unparalleled in the industry.

Promote safe cleaning conditions for SPD personnel, as well as improve patient safety and destroy microbes early in the instrument-cleaning process.

It’s a fact that UV light energy helps to reduce infection by killing bacteria. Now, for the first time, Ultra Clean brings you this added safety feature for you and the patients you protect from infection.

Cleaning Verification

Order your Triton 36 with the optional UCS-Verify for an easy way to record machine process data for better management of your ultrasonic cleaning cycles and productivity. See page 17 for more information.
Triton 36 Automatic Single Basin

- 8- to 13-minute ultrasonic cleaning cycle
- 15-minute dedicated da Vinci® wash cycle
- Industry-exclusive Titanium Rod Transducer (TRT) technology provides superior cavitation, allowing operators to clean more instruments in less time
- Automatic tray elevator safely raises and lowers for ease of use and operator safety
- Slide-and-lock trays for simple and efficient tray loading
- 36 dedicated ports for lumen instruments/3-tray capacity
- 40-lb instrument weight capacity
- 20 da Vinci instruments per cycle
- Dual purpose: can be used with hospital trays
- Fully automatic wash, rinse, and air purge
- Ultraviolet germicidal system
- Easy-to-use 7” touchscreen with programmable timer

When reprocessing Intuitive Surgical® instruments, it is important that the healthcare facility follow all directions in the latest Intuitive Surgical Reprocessing Instructions, as well as any instrument-specific instructions and supplements that may come with individual instruments.

See pages 12 and 13 for optional trays and adapters

Optional da Vinci Si tray cleans up to 10 instruments per tray.

The Triton 36 also accepts hospital trays.

Slide-and-lock trays provide easy loading.
Triton72 Automatic Ultrasonic Cleaning System

For large processing demands, our Triton 72 rises to the top with productivity. Every Triton tray can process up to 10 robotic or lumen instruments. With our custom adapters and Robotic Arm Cleaning Systems trays (RACS), every robotic instrument can be processed. The Triton 72 can process four complete sets of Xi-series robotics in 15 minutes.

This complete system is user friendly, with automatic lifts and slide-and-lock trays, and a 10" touchscreen. The Triton Series ultrasonic cleaning systems have more cavitation cleaning power than any machine available.

The Triton 72 has the largest throughput in the industry with 6 trays and 72 dedicated ports. Its capacity is truly unmatched.

The large, easy-to-use touchscreen on the Triton 72 can rotate left and right, and swing up and down for easy access as well as monitoring of your cleaning cycle status.

The Triton 72 also accepts hospital trays.

Optional da Vinci® Xi tray cleans up to 10 instruments per tray.
The Triton 72 allows you to operate both basins independently. You can load or unload one basin while the other is completing a cleaning cycle.

### Triton 72 Automatic Double Basin

- 8- to 13-minute ultrasonic cleaning cycle
- 15-minute dedicated da Vinci® wash cycle
- Industry-exclusive Titanium Rod Transducer (TRT) technology provides superior cavitation, allowing operators to clean more instruments in less time
- Automatic tray elevator safely raises and lowers for ease of use and operator safety
- Slide-and-lock trays for simple and efficient tray loading
- 72 dedicated ports for lumen instruments/6-tray capacity
- 40 da Vinci instruments per cycle
- 80-lb total instrument weight capacity
- Dual purpose: can be used with hospital trays
- Fully automatic wash, rinse, and air purge
- Ultraviolet germicidal system
- Easy-to-use 10” touchscreen with programmable timer

When reprocessing Intuitive Surgical® instruments, it is important that the healthcare facility follow all directions in the latest Intuitive Surgical Reprocessing Instructions, as well as any instrument-specific instructions and supplements that may come with individual instruments.

See pages 12 and 13 for optional trays and adapters

*Promote safe cleaning conditions for SPD personnel, as well as improve patient safety and destroy microbes early in the instrument-cleaning process.*

**Cleaning Verification**

Order your Triton 72 with the optional UCS-Verify for an easy way to record machine process data for better management of your ultrasonic cleaning cycles and productivity. See page 17 for more information.
Model 1150

The popular Model 1150 ultrasonic cleaning system delivers superior cleaning power in a compact design, ideally suited for most central sterile departments. The Model 1150 accommodates two lumen/standard instrument trays or one Floor Model Robotic Arm Cleaning Systems tray (RACS). Regular hospital trays may also be used.

Model 1150 Automatic Single Basin

- 8- to 13-minute ultrasonic cleaning cycle
- Industry-exclusive Titanium Rod Transducer (TRT) technology provides superior cavitation, allowing operators to clean more instruments in less time
- 24 dedicated irrigation ports
- Capacity for 8 robotic instruments per cycle
- 25-lb instrument weight capacity
- Air purge cycle dries the instruments inside
- Automatic enzyme dispensing capability
- Adjustable irrigation flow control
- Accepts hospital trays (without irrigation)
- Fully automatic wash, rinse, and air purge
- Large, easy-to-use graphical touchscreen with programmable timer

See pages 12 and 13 for optional trays and adapters
See page 16 for optional equipment

Use the sprayer to rinse off any excess detergent from instruments after the cleaning cycle.
Model 1522

For central sterile departments with a large volume of caseloads, we offer the Model 1522. With twice the capacity of Model 1150 and the ability to operate each basin independently, this system offers greater efficiency and versatility to your department. This ultrasonic cleaning system can be configured with or without irrigation in either basin. It’s the original dual-basin ultrasonic.

Model 1522 Automatic Double Basin

- 8- to 13-minute ultrasonic cleaning cycle
- Industry-exclusive Titanium Rod Transducer (TRT) technology provides superior cavitation, allowing operators to clean more instruments in less time
- 48 dedicated irrigation ports
- Cleans up to 4 trays simultaneously
- Capacity for 16 robotic instruments per cycle
- 50-lb instrument weight capacity
- Air purge cycle dries the instruments inside
- Automatic enzyme dispensing capability
- Adjustable irrigation flow control
- Accepts hospital trays (without irrigation)
- Fully automatic wash, rinse, and air purge
- Large, easy-to-use graphical touchscreen with programmable timer

See pages 12 and 13 for optional trays and adapters
See page 16 for optional equipment

Use the sprayer to rinse off any excess detergent from instruments after the cleaning cycle.
Model 1101

The Model 1101 is a versatile tabletop ultrasonic solution for central sterile managers looking for a fast and efficient way to process complex surgical instruments. The extra-wide 8.6-gallon basin is ideal for longer bariatric and robotic instruments. It includes a tray for lumen instruments with 12 dedicated ports, and can use regular hospital trays.

Model 1101 Automatic Tabletop System

- 8- to 13-minute ultrasonic cleaning cycle
- Industry-exclusive Titanium Rod Transducer (TRT) technology provides superior cavitation, allowing operators to clean more instruments in less time
- 12 dedicated irrigation ports
- Capacity for 8 da Vinci® robotic instruments per cycle
- 25-lb instrument weight capacity
- Air purge cycle dries the inside of the instruments
- Automatic enzyme dispensing capability
- Adjustable irrigation flow control
- Accepts hospital trays (without irrigation)
- Fully automatic wash, rinse, and air purge
- Large, easy-to-use graphical touchscreen with programmable timer

See pages 12 and 13 for optional trays and adapters
See page 16 for optional equipment

With the optional tray, Model 1101 has the capacity to clean up to eight da Vinci robotic instruments per cycle.
Model 1100

The Model 1100 is a competitively priced surgical instrument cleaning system with the capability of processing 12 lumen instruments, plus many noncannulated instruments combined in a 10-minute cleaning cycle.

The Model 1100 is the easiest and most versatile tabletop system. The touchscreen display provides the operator with an easy-to-use menu, allowing both cannulated and nonlumen instruments to be cleaned simultaneously.

This system fits perfectly in any sterile processing department workflow, as it automatically fills to the appropriate level, has an auto-rinse function, and automatically drains.

Model 1100 Automatic Tabletop System

- 10- to 15-minute ultrasonic cleaning cycle
- 12 dedicated irrigation ports
- 12.5-lb instrument weight capacity
- Auto-fill
- Auto-drain
- Adjustable irrigation flow control
- Bonded transducers
- Accepts hospital trays (without irrigation)

See page 16 for optional equipment
## Trays and Adapters

### Robotic Arm Cleaning System (RACS)

We offer RACS trays to clean robotic instruments for nearly every ultrasonic cleaner we make. With custom color-coordinated adapters and these specialized trays, our Triton 36 and 72 machines can process every robotic instrument; and Models 1150, 1522, and 1101 can process S, Si, and Single-Site robotic instruments.

Quality Statement

Ultra Clean Systems, Inc. is a leader in sterile processing. We provide healthcare facilities with the highest performing ultrasonic cleaning systems, detergents, and related products that enhance patient safety, increase productivity, and save valuable time and money.

Through continuous monitoring and improving our quality management system, our goal is to further advance the field of sterile processing with better, more efficient products that make difficult jobs easier, while keeping the focus on patient care. Our commitment to quality is reflected in the ISO 9001 quality management and ISO 13485 medical devices standards to which we adhere.

We have established a culture that supports our employees and encourages them to learn, grow, and succeed so they can provide our customers with the best quality, service, and value in the industry.
Wire Mesh Trays

Ultra Clean Systems is proud to offer a comprehensive range of all-purpose, general-use stainless steel trays and specialty accessories that are compatible with our ultrasonic cleaning machines, as well as those from other manufacturers. Our line of mesh trays can also be used in washer-disinfectors.

These premium stainless steel wire mesh trays feature easy-to-secure slide-and-lock lids (sold separately). These trays will seamlessly fit into any processing department and can be used in various applications. You can use them in sophisticated ultrasonic cleaning machines, tabletop workstations, or rinsing sinks.

- Our smooth mesh/perforated design provides users with a safe and easy-to-use tray with no burrs, which prevents damage to wraps or technicians.

- Transport your instruments through the washing and sterilization process.

- Safety edges help prevent injury and damage to instruments.

- Easy slide-and-seal tray tops allow for quick loading and unloading while keeping instruments secure during cleaning.

- Tray sizes accommodate all types of hospital instruments. Smaller trays (sold separately) can sit inside larger trays during a wash cycle to store subassemblies and attachments.

- DIN compliant.

- Trays are stackable.

- Made from high-grade, polished 304 nonmagnetic stainless steel.

We have tray options to accommodate all size and configuration needs. Contact our sales department toll free at 877-935-6624 for sizing options and pricing.

Use stainless steel trays in your sterile processing department to safely and securely pack and stack clean instruments. Trays have smooth, rounded corners and edges to avoid common problems, such as wraps being torn and injury due to sharp edges.
Wire Mesh Trays

Complete your tray purchase with a lid attachment (sold separately) to keep your instruments secure during washing and to provide easy storage solutions.

- Lids fit directly inside of each tray, sitting flush with the handles and edges to keep instruments secure.
- Trays are stackable with lids attached.
- Welded stainless steel construction with no burrs!
- Flat base with cross-hatched mesh design for increased cleaning efficiency.
- We have a lid to fit every tray size.
- Lockable, with up to two latches per lid.

Trays have retractable handles on each side for easy lifting. The handles can stay raised for quick lifting, or they can sit flush with a lid when attached.

Each lid is equipped with slide-and-seal locks, ensuring that trays and instruments are secure during cleaning.
Optional Equipment

Backsplashes
Space is at a premium, and we have the solution. When you purchase a Model 1150 or Model 1522, be sure to order the optional backsplash with integrated tray holders. The backsplash for Model 1150 holds two trays, and the backsplash for Model 1522 holds four trays.

Our backsplashes will help keep your work area clutter-free and create extra storage, without increasing your cleaner’s footprint. Backsplashes may be ordered separately and added to a Model 1150 or 1522 that’s already in your sterile processing department (SPD).

Cart
Ideal for any SPD, this rugged cart is the perfect platform for our tabletop ultrasonic cleaners, and it has copious space below for holding detergent.

The stainless steel cart has a 34"W x 26"D top surface, perfect for use with Models 1100 and 1101. Features include a locking cabinet and drawer with two sets of keys, a spacious open storage area on the bottom, and toe-lock wheels.

Side Cabinet
Our side cabinet is a welcome addition to any sterile processing department. The three spacious shelves allow you to keep materials handy and out of the way. It features heavy-duty wheels and mounting holes to secure it to a wall.
Ultra Clean Systems proudly offers UCS-Verify Process Verification Software. UCS-Verify records a variety of useful data, including time of wash cycle, water temperature, ultrasonic performance, irrigation efficiency, enzymes present, and the operator ID.

UCS-Verify exports this valuable data directly to a USB drive for an easy and secure transfer. Data can be easily exported into Excel® for complete reporting and analysis.

UCS-Verify provides a safe and easy way to record your machine process data for better management of your ultrasonic cleaning cycles and staff productivity.

**Accuracy and Productivity**

- Facilitate accuracy and electronically document ultrasonic cleaning cycle data
- Benchmark individual and team productivity
- Reduce the risk of ultrasonic cleaning errors
- UCS-Verify delivers total traceability, so you always have a documented record of whether the correct procedures have been followed
- Maintain an overview of the most important machine data, such as cycle phases, temperature, and concentration of detergent
ProReveal Fluorescent Protein Detection System

The ProReveal uniquely visualizes and measures invisible residual proteins on surgical instruments after they have been sterilized. The system shows you exactly where and how much protein is present on a surgical instrument.

A surgical instrument selected from an automatic washer-disinfector cycle can be tested. Specific information about the instrument and the wash cycle is collected and over time provides valuable data on the sterile processing department (SPD) cleaning effectiveness.

vCJD (mad cow disease) is a misfolded protein (prion) that is fatal. By tracking your protein levels, you can effectively reduce your risk of hospital acquired infections (HAIs), and even vCJD. This has a huge impact on the ability for your SPD to effectively do cleaning verification, as referenced in the AAMI Guideline Annex D.

What it does
ProReveal uses a combination of a nontoxic spray and fluorescent digital imaging to deliver a comprehensive, highly sensitive, visual record of where and how much protein remains after cleaning. This is performed in a matter of minutes.

How it works
Once an instrument is sprayed, it is placed into the tray and, using a simple interface, an image of the instrument is displayed showing where and how much protein is present. A 3D representation can also be displayed showing the concentration of protein in any given location.

Who would like to be operated on with this instrument, which has more than 64 µg of protein left on it after washing?

Think these are clean? A ProReveal test indicated a residual protein level of 13.9 µg.

The ProReveal Plot Function
This graph shows two scatter plots over the period of one month for a typical washer, during which many ProReveal protein tests were done. The yellow trend lines show a gradual increase in the level of residual protein being found, pointing to the need for attention to cleaning optimization.
ProReveal Fluorescent Protein Detection System

For the ultimate in sterile processing, be sure to add ProReveal cleaning verification to your toolbox. Combined with our ultrasonic cleaners and UCS-Verify, you’ll have maximum performance; thorough tracking of your process data; and simple, clear indication of the cleanliness of your instruments.

ProReveal Features and Benefits

• Helps to reduce HAIs
• Rapid result in about 3 minutes, with no scrubbing, swabbing, or guesswork
• Displays and records where protein is present
• Provides the amount of protein on an instrument
• 3D representation of the instrument shows where protein is present and how much
• Collects valuable data on SPD efficacy
• Visual trend graphs to plot performance criteria

Neither prions nor any other forms or proteins are acceptable residing on surgical instruments. By benchmarking your SPD with the ProReveal, you can avoid potentially infectious problems before they happen. The ProReveal can even help reduce the risk or prion disease, such as vCJD, which is fatal.

See page 27 for specifications
Surgical Instrument Care: Brushes

Single-Use and Reusable Brushes
Ultra Clean Systems provides a wide array of wire brushes to accommodate any instrument-cleaning task. Symmetrical and asymmetrical brushes are available in a variety of lengths, colors, diameters, and rigidness.

Single Wire Brushes: Flexible & Rigid - 12”/30 cm
Single Wire Brushes: Flexible & Rigid - 18”/45 cm
Single Wire Brushes: Flexible & Rigid - 24”/60 cm
Single Wire Brushes: Flexible & Rigid - 30”/75 cm

Twisted Wire Brushes
For uniquely shaped instruments or for instruments needing a thin but rigid design, Twisted Wire Brushes extend the cleaning applications, especially for suction tubes and small bore instruments. Our Broncho Brushes feature a unique bristle contour for thorough bronchoscopy instrument cleaning.

Frazier/Baron Suction Tubes Brushes
Nylon Twisted Wire Brushes - 12”/304 mm
Nylon Twisted Wire Brushes - 16”/406 mm
Nylon Twisted Wire Brushes - 24”/610 mm

Broncho Brushes
(Biconical Bristle Contour)

Tracheostomy Brushes

Reusable Jar Brush

Call us today toll free at 877-935-6624 for our comprehensive line of brushes and instrument care products.

Don’t just think Clean,
think Ultra Clean.

Reusable Brushes
Asymmetrical Double Wire Brushes - 14”/35 cm
Asymmetrical Double Wire Brushes - 20”/50 cm
Asymmetrical Double Wire Brushes - 26”/66 cm
Asymmetrical Double Wire Brushes - 31”/79 cm

Reusable Double Brushes - 5 mm/11 mm
Symmetrical Double Wire Brushes - 14”/35 cm
Symmetrical Double Wire Brushes - 20”/50 cm
Symmetrical Double Wire Brushes - 26”/65 cm
Symmetrical Double Wire Brushes - 31”/80 cm
Surgical Instrument Care: Brushes

Reusable/Autoclavable Precision Flat Brushes
With our rigid-handled design and wide selection of bristle strengths, Ultra Clean Systems’ flat brushes are very effective for tough cleaning applications with no damage to your valuable surgical instruments. Best of all, our brushes are reusable and autoclavable.

We also offer a rigid and a flexible brush for single-use applications.

Call us today toll free at 877-935-6624 for our comprehensive line of brushes and instrument care products.

Plastic Handle Brushes
Our plastic contour-handled brushes are great for large bore and uniquely shaped and endoscopic instruments. We offer a stainless wire bristle for tough applications, and a nylon bristle brush for more delicate applications.

For versatility in a single brush, we offer a double-ended nylon brush.
Surgical Instrument Care

Instrument Tip Protectors
Instrument protectors provide a simple and safe way to care for your surgical instruments. We have a wide selection of sizes, colors, and forms to meet most any instrument application. These protectors slide on easily and help to keep instruments sharp, as well as to help you avoid injury.

Padlock Security Tags
A well-run OR starts with a well-organized sterile processing department. Increased organization starts with our tamperproof padlocks, which provide a simple-to-use and visually effective approach to increased hospital efficiency. Our padlocks are available in many colors and serve a variety of functions.

Instrument Identification Tracking
Our identification tracking system is an extremely cost-effective and lasting means for keeping track of your OR instruments. These durable tapes come in many different color groupings, including striped color combinations; in 8.5” x 11” sheets; as well as a variety of solid colors and widths in long roll form.

White Sheets
1/4”/6.35 mm height/variable widths

Black Stripe Sheets
1/4”/6.35 mm height/variable widths

Tricolor Stripe Sheets
3/8”/9.53 mm height/variable widths

Color-Coding Tape Rolls
1/8” x 25’
1/4” x 25’

ID tape sheets
ID tape rolls

Contact us today toll free at 877-935-6624 for our complete line of instrument care products.
Wash-Checks®

To help you monitor how effectively your department is cleaning instruments, we offer Wash-Checks and Wash-Checks U. The red Wash-Checks measure the effectiveness of your washer-disinfector system, while the blue Wash-Checks U are exclusively for your ultrasonic cleaner.

Test soil is designed to parallel the removal of bioburden from surgical instruments (no blood components from any source are contained in the test soil). When the cleaning conditions are effective, the test soil (red or blue patch) is dissolved.

Features and Benefits

- Easy to use; simply place monitor in holder and place in trays or hang on side of the tray
- Low-cost monitors promote routine use and consistent monitoring (one monitor per tray washed is recommended)
- Designed for easy retention in permanent records
- All monitors show Lot Number and Expiration Date (18-month shelf life)
Detergents

Sanizyme Triple Enzymatic Detergent
Sanizyme is a proprietary blend of enzymes that removes organic matter safely and effectively from your valuable surgical instruments. This special low-foaming, pH-neutral formula is ideal for ultrasonic cleaners, washers, and other automated equipment. The fast-acting power of Sanizyme will remove blood, protein, and myriad bioburden, making it the most effective solution for your processing needs. Recommended use 1 oz per gallon of water.

Sterizyme
Sterizyme is the concentrated form of Sanizyme. Recommended use 1/10 oz of Sterizyme per gallon of water. It’s a more economical choice.

Ultra Clean Systems proudly offers a complete range of detergents in a variety of sizes to meet all your cleaning needs. Choose from 30-gallon, 15-gallon, 5-gallon, 2.5-gallon, and our popular new 1-gallon sizes.

Now available in 1 gallon, Item # 92-0004

Sanizyme and Sterizyme Triple Enzymatic Detergents are now available in convenient one-gallon sizes.
Instrument Care Products

**Adhesive Remover - 8 oz bottles**
Ultra Clean Adhesive Remover quickly removes even the most stubborn labels and stickiest residue. Specially formulated for the removal of adhesives, markers, ID tape, oil, grease, wax, gum, and glue from medical equipment and instruments, our adhesive remover allows you to easily peel away labels and tape and wipe away any gluey residue, resulting in a lower chance of cross-contamination, easier precleaning prep, and a shorter cleaning process.

- Item # 90-0075 (12 pack)
- Item # 90-0077 (6 pack)
- Item # 90-0076 (3 pack)

**Transport Gel - 32 oz bottles**
Ultra Clean Transport Gel is a triple-enzymatic gel that evenly coats surgical instruments and begins breaking down debris. Transport Gel will not dry out, which keeps instruments moist and capable of being cleaned easier and better. Simply spray this gel on your instruments immediately following a procedure.

- Item # 90-0095 (12 pack)
- Item # 90-0097 (6 pack)
- Item # 90-0096 (3 pack)

**Spray Lube - 32 oz bottles**
Ultra Clean Spray Lube is a ready-to-use spray lubricant that extends the life of surgical instruments. Our nontoxic, nonoily, and nonsticky spray lube forms a protective barrier on your instruments, ensuring long-term function of critical box locks, hinges, jaws, and joints.

- Item # 90-0065 (12 pack)
- Item # 90-0066 (6 pack)
- Item # 90-0067 (3 pack)

**Surgical Milk - Ready to Use**
Surgical Milk is a nonsilicone formula that is steam permeable and prevents wear on hinges and box locks. Surgical Milk Ready to Use requires no mixing and is good for use on stainless steel, tungsten, aluminum, and carbide instruments.

Personal Care

Splash Shields
Make your work life more comfortable! Sterile processing is a demanding job done in a tough, often harsh environment. Wear our foam-padded Splash Shields to raise your comfort level and provide you with exceptional safety from bioburden debris.

Full-face Splash Shields offer ample face and eye protection. The one-size-fits-all 13”W x 7.5”H shield is optically clear and provides excellent antifog protection.

Item # 120-1000 (case of 288)
Item # 120-1001 (box of 24)

Joint Commission Compliance Tool
We all know it is a requirement and safety standard to keep your pass-through windows closed. To stay compliant, especially during hospital inspection, apply this great reminder to *keep your pass-through windows closed*.

The Joint Commission Compliance Tool comes in sets of two. They are brightly colored so you can’t miss them. Apply to both sides of your pass-through windows and feel confident that they will remain closed.

UltraCare: Preventative Maintenance, Extended Warranty, On-Site Service

All Ultra Clean Systems’ ultrasonic cleaners include a one-year limited warranty, which includes complete coverage of your system, machine components, and the cost of labor to service your machine in the event of any problems or failures. Extended warranty packages are available for one, three, and five years to add even more protection to your system.

UltraCare offers the option to add preventative maintenance (PM) visits to your existing warranty, without bundling, with the UltraCare Preventative Maintenance Plan. We also offer customizable plans with as many PM service visits needed. UltraCare has a solution that works for you.

Because we manufacture all of our own systems, operating software, and related accessories, Ultra Clean products are truly all-inclusive systems. Only UltraCare services offer you one-stop technical support, on-site service from more than 100 qualified technicians, and preventative maintenance programs, resolving most issues in a single service call.

We offer three tiers of UltraCare extended warranty plans for Models 1101, 1150, 1522, Triton 36, and Triton 72 ultrasonic cleaners: Platinum, Gold, and Silver. This multilevel system allows the user to customize the level of care that best suits department and facility needs.

Please call Ultra Clean Systems toll free at 877-935-6624 to speak with one of our team members to assist with determining which UltraCare services are best for your ultrasonic.
Specifications

Triton36
(From pages 4–5)
• Tap, reverse osmosis, and deionized water compatible
• 208-volt wall receptacle
• 24”W x 49”D x 63”H (carriage up)
• 30-gallon basin capacity
• 40-lb total weight capacity

Model 1150
(From page 8)
• Tap, reverse osmosis, and deionized water compatible
• 208-volt wall receptacle
• 30”W x 27.5”D x 40”H (lid open)
• 12.3-gallon basin capacity
• 25-lb total weight capacity

Model 1522
(From page 9)
• Tap, reverse osmosis, and deionized water compatible
• 208-volt wall receptacle
• 34”W x 54”D x 63”H (carriage up)
• 30-gallon capacity per basin (x2 basins)
• 80-lb total weight capacity

Model 1101
(From page 10)
• Tap, reverse osmosis, and deionized water compatible
• 120-volt wall receptacle
• 34”W x 26.25”D x 18.5”H (lid open)
• 8.6-gallon basin capacity
• 25-lb total weight capacity

Model 1100
(From page 11)
• 120-volt wall receptacle
• 30”W x 18”D x 18”H (lid open)
• 5.75-gallon basin capacity
• 12.5-lb total weight capacity

Triton72
(From pages 6–7)
• Tap, reverse osmosis, and deionized water compatible
• 208-volt wall receptacle
• 34”W x 54”D x 63”H (carriage up)
• 30-gallon capacity per basin (x2 basins)
• 80-lb total weight capacity

Model 1150
(From page 8)
• Tap, reverse osmosis, and deionized water compatible
• 208-volt wall receptacle
• 30”W x 27.5”D x 40”H (lid open)
• 12.3-gallon basin capacity
• 25-lb total weight capacity

Model 1522
(From page 9)
• Tap, reverse osmosis, and deionized water compatible
• 208-volt wall receptacle
• 34”W x 54”D x 63”H (carriage up)
• 30-gallon capacity per basin (x2 basins)

Mission Statement
Ultra Clean Systems, Inc. was born out of a need to provide healthcare facilities with better, more reliable ultrasonic cleaners for their sterile processing departments. Since then, we have been leading the industry with efficient designs that provide the most throughput available, while enhancing patient safety. Through constant research and innovation, we aim to continually improve sterile processing and remain an ethical leader, and your partner, in the industry.
